

# Paul Miller

pauljwmiller@gmail.com | 804-513-0633 | github.com/pauljwmiller

## TECHNICAL SKILLS

**Cloud & IaC:** Azure (VMs, Key Vault, AKS, ACR, NSG, VNet), Terraform (Infrastructure as Code), Ansible, Docker, Kubernetes

**CI/CD & DevOps:** Azure DevOps Pipelines, Git, Agile/Scrum, self-hosted agents, YAML pipelines

**Languages:** Python, C#, JavaScript, Java, SQL, PowerShell, YAML, HTML/CSS

**Web & Frameworks:** .NET 9 / ASP.NET Core, React, Node.js, Express.js, Django, Vite, Supabase, Heroku

**Observability & Data:** New Relic (APM + Infrastructure), PostgreSQL, Tableau, QGIS, Excel, ETL pipelines

**Security:** Azure AD / JWT authentication, Managed Identity, Row Level Security, OCR (Tesseract.js)

## PROJECTS

### Azure Cloud Infrastructure & DevOps

Mar 2026

*Terraform (IaC), Ansible, Docker, Kubernetes (AKS), Azure DevOps CI/CD, .NET 9, New Relic*

- Provisioned Azure-native infrastructure with Terraform: Windows Server 2025 VM, VNet/Subnet, NSG with IP-restricted access, Key Vault with randomized credentials, Container Registry, and AKS cluster.
- Built two Azure DevOps pipelines (plan-on-PR, apply-on-merge) that run Terraform, build/push Docker images to ACR, deploy to AKS via kubectl, and execute Ansible playbooks — zero manual steps after merge.
- Developed a .NET 9 Web API secured with Azure AD JWT authentication and Managed Identity for Key Vault access; containerized with a multi-stage Dockerfile and deployed to AKS.
- Wrote idempotent Ansible playbooks (over WinRM) to configure Windows Server/IIS, deploy the API as a Windows Service, and install New Relic agents. Built observability dashboards with NRQL for APM and infrastructure monitoring.
- Used Claude Code throughout the project to accelerate development, debug infrastructure issues, and generate Terraform/Ansible configurations — validating all outputs against live Azure behavior before applying.

### Self-Employed Income Underwriting Tool

Feb 2026

*React, Vite, Supabase (PostgreSQL + Auth + Storage), Tesseract.js, Vercel — [github.com/pauljwmiller/underwriting-app](https://github.com/pauljwmiller/underwriting-app)*

- Built a loan pipeline app for mortgage underwriters to upload IRS 1040 tax returns, extract income fields via OCR (Tesseract.js + pdf.js), review/correct data, and calculate qualifying income under Fannie Mae, Freddie Mac, HUD, and VA guidelines.
- Implemented Supabase Row Level Security, role-based access (underwriter/loan officer/manager), private document storage, and a multi-step workflow with audit trail. Deployed to Vercel.

### Personal Portfolio Site

2026

*React, Express.js, Node.js, Render — [pern-portfolio-1wy1.onrender.com](https://pern-portfolio-1wy1.onrender.com)*

## EDUCATION

### University of Virginia, College of Arts and Sciences

Aug 2021 – May 2025

*B.A. Computer Science — GPA: 3.207 — Coursework: Cybersecurity, Software Engineering, Data Structures & Algorithms*

## PROFESSIONAL EXPERIENCE

### Blue Ridge Medical Center — Data Specialist

Sep – Dec 2025

- Analyzed community needs and conducted healthcare research to advise the medical center through reports and data analysis.
- Built desktop applications with Python and PostgreSQL to give leadership insight on provider compliance.
- Designed ETL pipelines and Tableau dashboards for data warehousing and community health data modeling.
- Created GIS solutions to data mapping challenges using QGIS, JavaScript, and Leaflet to identify underserved areas.

### Virginia Dept. of Social Services — Systems Support Intern

Jun – Sep 2023

- Automated secure inter-agency file transfers by building MFT workflows in GoAnywhere, replacing manual handoffs.
- Collaborated with a hybrid team to develop low-code applications for scheduled and on-demand file transfers across agency systems.

### Epicured — Data Management Specialist

Jun 2022 – Jan 2023

- Cleaned financial data in Excel for executive reporting and K1 tax filings; architected a digital asset management system for collaborative access to photography, video, and design files.

### True-Coast — Application Developer & Media Manager

Jul – Sep 2021

- Researched GIS API integrations via GitHub; designed and executed a multi-platform social media campaign, creating all graphics and infographics.
